

# MOTORCYCLE SCISSOR LIFTS

XM7

# XM7

THE XM7 IS AN EXTREMELY POWERFUL AND COMPACT SCISSOR LIFT DESIGNED ESPECIALLY FOR SERVICING MOTORCYCLES. WITH A CAPACITY OF 700 KG, EVEN LARGE AND HEAVY MOTORCYCLES CAN BE LIFTED. THE OPTIONAL ADAPTATION KIT FACILITATES THE SUPPORT OF QUADS.

## DETAILS

To ensure the support of different wheel dimensions, the XM7 features a universal support. The platform provides 5 positions for attaching it.

The hinged rear wheel cut-out grants the user free access to the rear wheel.

The operating panel features an integrated hydraulic unit and thus significantly contributes to a low installation effort. All 4 side parts can easily be removed for maintenance.

Mobility is an essential factor! The low installation effort and the mobile operating panel facilitate rapid and random selection of the lift location.

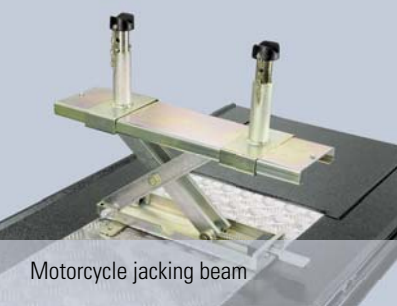

Non-contact inductive proximity switches provide for reliable functioning even in harsh environments. Moreover, there is no mechanical wear.

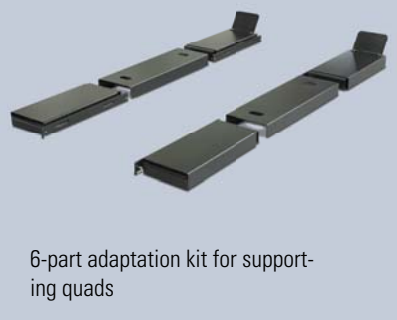

Robust and reliable: Pneumatically lockable drop-off device.

The integrated emergency lowering device facilitates lowering the load in the event of a power failure. The lift itself is operated from a safe distance via the operating panel.

## ACCESSORIES

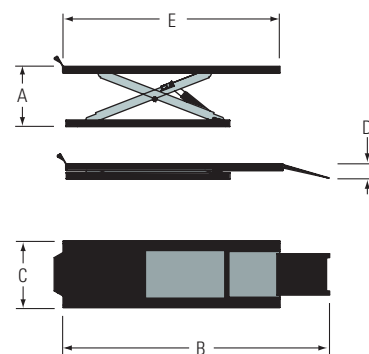

Motorcycle jacking beam

6-part adaptation kit for supporting quads

Model:	XM7
Capacity	700 kg
A. Stroke	1200 mm
B. Overall length with/without drive on ramps	2225/2695 mm
C. Overall width with/without adaptation kit (Quad)	760/1270 mm
D. closed height	160 mm
E. Platform length	2225 mm
F. Platform width	720 mm
Motor performance	0,75 kW
Jacking beam capacity*	500 kg
Jacking beam stroke*	400 mm
Electrical connection (1 phase)	230 V, 50 Hz
Compressed air connection	4-6 bar
Lifting time	30 sec.
Lowering time	25 sec.
Weight	200 kg
